Dear Friends,

Over the years we have been asked to provide an overview of geosynthetics for use in geotechnical (and related) classes at the undergraduate and/or graduate level. We finally(!) have done so and the material is available on a CD that includes 68-screens, each with a 30 to 70-second voice description. With a bit of a stretch the material can be presented in a single 50-minute class. The title and subdivisions are as follows:

“A Brief Overview of Geosynthetics and Their Major Applications”

1. Geosynthetic Materials (24 screens)
2. Transportation/Geotechnical (10 screens)
3. Geoenvironmental (11 screens)
4. Hydraulics (12 screens)
5. Private Development (6 screens)
6. Conclusion (5 screens)

The entire presentation is generic, i.e., no trade names and there are lots of neat photos throughout the application areas. Remember, it's introductory...

The CD's are free and I ask you to provide us with your mailing address and how many copies you would like to receive. Your geotech colleagues as well as others in related areas might be interested as well.

We hope you find the effort worthwhile and would be glad to hear feedback of any type.

Best regards to all.

Bob Koerner
